

Audiolab MDAC software update guide using Windows.

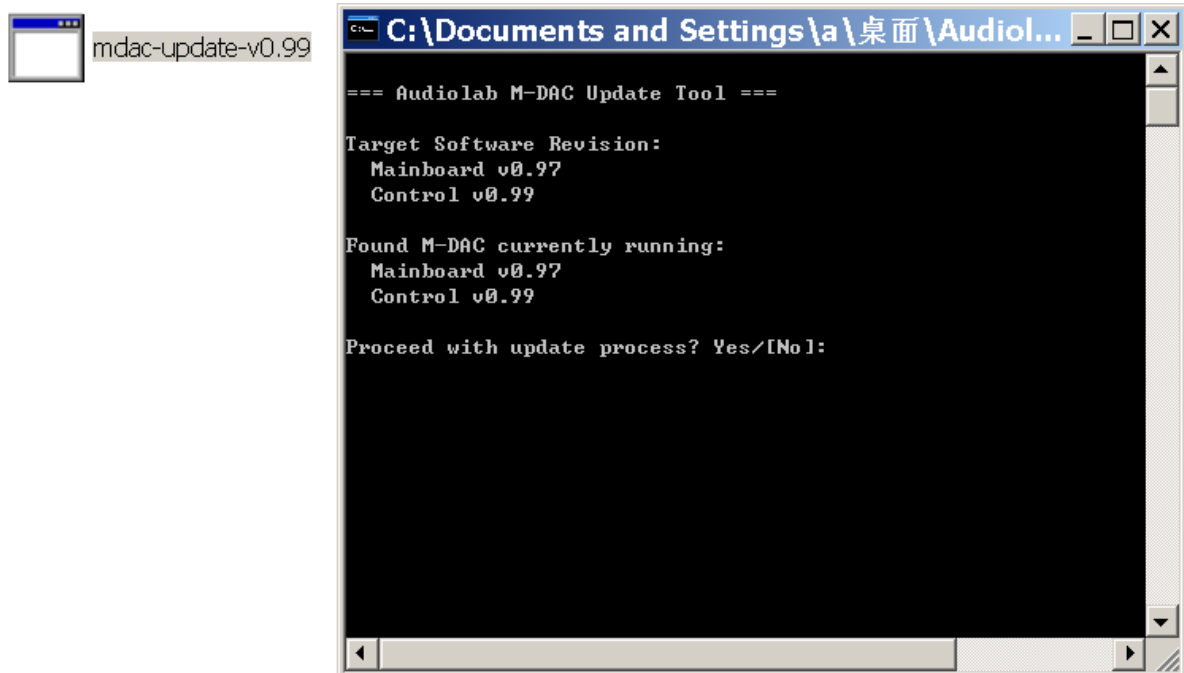

The Audiolab MDAC can be updated with new software version (Mainboard v0.97/Control v0.99) the update will update from the old version: (Mainboard v0.9/Control v0.9 or Mainboard v0.96/Control v0.96).

The method to check the software version : while M-DAC is switched off, press and hold front panel "Volume round control knob in "and "Press the front panel power button" on at the same time the software version is shown on the MDAC's display.

If the MDAC software version is (Mainboard v0.9/Control v0.9 or Mainboard v0.96/Control v0.96) please update it to the latest version Mainboard v0.97/Control v0.99 according to the following steps:

1) : Switch on MDAC and connect it's USB port on the mainboard to the computer using a USB 2.0 certified cable, Double click "mdac-update-v0.99" supplied in the folder with these instructions,

Now the following dos window will pop up showing the software version to be updated.

```
=== Audiolab M-DAC Update Tool ===

Target Software Revision:
